### ABSTRACT

This study investigates the factors that influence the implementation of blended learning and artificial intelligence (AI) in teaching and learning in Indonesia. Five factors are proposed: Structure and Support System, Schedule Blended learning, Pedagogy Support, Method in Blended Learning, and Assessment in Blended Learning. The study employed a questionnaire survey method to gather data from 625 lecturers who had implemented blended learning at universities in Indonesia. The structural equation model using the partial least square method (PLS-SEM) was employed to analyze the data. The findings of the study demonstrate that all five independent variables (Structure and Support System, Schedule Blended learning, Pedagogy Support, Method in Blended Learning, and Assessment in BL) exhibit a significant positive correlation with the dependent variable, Blended Learning-AI in teaching learning. The results of this study provide empirical evidence to support the proposed hypotheses. The study also provides insights into the factors that may influence the effectiveness of implementation of blended learning and AI in teaching and learning.

### RESUMEN

Este estudio investiga los factores que influyen en la implementación del aprendizaje combinado y la inteligencia artificial (IA) en la enseñanza y el aprendizaje en Indonesia. Se proponen cinco factores: Estructura y Sistema de Apoyo, Horario de Aprendizaje Combinado, Apoyo Pedagógico, Método en el Aprendizaje Combinado y Evaluación en el Aprendizaje Combinado. El estudio empleó un método de encuesta por cuestionario para recopilar datos de 625 profesores que habían implementado el aprendizaje combinado en universidades de Indonesia. Para el análisis de los datos se empleó el modelo de ecuaciones estructurales mediante el método de mínimos cuadrados parciales (PLS-SEM). Los resultados del estudio demuestran que las cinco variables independientes (Estructura y Sistema de Apoyo, Horario de Aprendizaje Combinado, Apoyo Pedagógico, Método en Aprendizaje Combinado y Evaluación en BL) exhiben una correlación positiva significativa con la variable dependiente, Blended Learning-IA en la enseñanza del aprendizaje. Los resultados de este estudio aportan evidencia empírica para apoyar las hipótesis propuestas. El estudio también proporciona información sobre los factores que pueden influir en la eficacia de la implementación del aprendizaje combinado y la IA en la enseñanza y el aprendizaje.

## 1. Introduction

The educational landscape has undergone a significant transformation due to rapid technological progress, leading to the emergence of innovative methods for teaching and learning (Delenko & Sholovii, 2023; Hernández et al., 2024; Kebir, 2023). Blended learning, a pedagogical approach that seamlessly combines traditional face-to-face instruction with online learning activities, has emerged as a promising alternative to conventional classroom-based education. This strategy creates a vibrant learning environment that caters to the diverse needs and preferences of students, promoting flexibility, customization, and increased involvement.

The integration of artificial intelligence (AI) into blended learning environments has further amplified its potential to transform teaching and learning (Dimitriadou & Lanitis, 2023; Ng et al., 2023; Stone, 2023). AI-powered tools, such as adaptive learning systems, intelligent tutoring systems, and data analytics dashboards, provide educators with valuable insights into student performance and preferences, enabling them to tailor instruction to individual needs and optimize learning outcomes. The fusion of traditional and online teaching methods presents a promising avenue for optimizing learning experiences (Goyal et al., 2023; Panova et al., 2023; Yc et al., 2023). As Indonesia's higher education sector witnesses increasing adoption of blended learning, it becomes imperative to delve into the foundational aspects that contribute to its effectiveness.

### 1.1. The Influencing Factors of the Blended Learning Model at the AI Era

#### 1.1.1. *Structure and Support System Related to Blended Learning*

In the era of artificial intelligence (AI), blended learning frameworks have emerged as formidable tools for enhancing teaching and learning processes (Arul Raj et al., 2024; Ng et al., 2023; Park & Doo, 2024). These frameworks combine traditional face-to-face instruction with online activities, offering dynamic and tailored educational encounters. However, the efficacy of blended learning relies on a thoughtfully designed and supportive system that meets the needs of both students and instructors.

A well-structured and supportive system is essential for the effectiveness of blended learning models (Rahmi et al., 2024; Southern Federal University & Moskvina, 2023; Tuğtekin, 2023). This system should include clear expectations and guidelines, technical support, and pedagogical support, ensuring students and instructors have the resources they need to utilize technology successfully in the learning process. Accordingly, the present study posits the following hypotheses:

- **Hypothesis 1 (H1):** Structure and Support System Related to Blended Learning significantly influences Blended Learning and Artificial Intelligence in Teaching and Learning.
- **Hypothesis 2 (H2):** Pedagogical Support Related to Blended Learning mediates the relationship between Structure and Support System and Blended Learning-Artificial Intelligence in Teaching and Learning.

### *1.1.2. Class Schedule Related to Blended Learning*

The class schedule plays a pivotal role in the effectiveness of blended learning models (Delenko & Sholovii, 2023; Henseruk et al., 2023). Educators can craft class schedules that foster student engagement, promote efficient time management, and optimize the use of AI-powered tools, potentially revolutionizing teaching and learning. Thus, the following hypotheses are proposed:

- **Hypothesis 3 (H3):** Class Schedule Related to Blended Learning significantly influences Blended Learning-Artificial Intelligence in Teaching and Learning.
- **Hypothesis 4 (H4):** Pedagogical Support Related to Blended Learning mediates the relationship between Class Schedule and Blended Learning-Artificial Intelligence in Teaching and Learning.

### *1.1.3. Method of Blended Learning and AI in Teaching and Learning*

Blended learning and AI, though nascent, hold immense promise for revolutionizing the teaching and learning landscape (Zhang et al., 2024). As AI evolves, the emergence of more innovative AI applications in blended learning environments is anticipated. Thus, the following hypothesis is proposed:

- **Hypothesis 5 (H5):** Blended Learning Method significantly influences Blended Learning and Artificial Intelligence in Teaching and Learning.
- **Hypothesis 6 (H6):** Pedagogical Support mediates the relationship between Blended Learning Method and Blended Learning-Artificial Intelligence in Teaching and Learning.

### *1.1.4. Assessment of Blended Learning and AI in Teaching and Learning*

Opportunities associated with AI in blended learning assessment include increased flexibility and the provision of real-time, personalized feedback, enhancing the effectiveness, fairness, and personalization of assessments (Camacho-Zuñiga et al., 2023; Inprasitha, 2023; Sallam et al., 2023). Therefore, the following hypothesis is made:

- **Hypothesis 7 (H7):** Assessment significantly influences Blended Learning and Artificial Intelligence in Teaching and Learning.
- **Hypothesis 8 (H8):** Pedagogical Support mediates the relationship between Assessment and Blended Learning-Artificial Intelligence in Teaching and Learning.

### 1.1.5. Pedagogical Support Mediates Blended Learning and AI in Teaching and Learning

Pedagogical support is crucial for the success of blended learning and AI in teaching and learning, helping instructors create effective and engaging courses (Casal-Otero et al., 2023; Li & Wong, 2023; Warner et al., 2023). Therefore, the following hypothesis is made:

- **Hypothesis 9 (H9):** Pedagogical Support significantly influences Blended Learning and Artificial Intelligence in Teaching and Learning.

## 1.2. Conceptual Framework

**Figure 1**

Conceptual Framework

Figure 1 depicted in the succeeding section illustrates the derived conceptual framework as obtained from this particular study. This framework explores and analyzes five distinct direct relationships, namely Hypothesis 1 (H1), Hypothesis 3 (H3), Hypothesis 5 (H5), Hypothesis 7 (H7) and Hypothesis 9 (H9). Besides, this framework also examines the four mediating Hypothesis 2 (H2), Hypothesis 4 (H4), Hypothesis 6 (H6): and Hypothesis 8 (H8).

## 2. Methodology

In this research, a quantitative approach was embraced, utilizing an online survey targeted at lecturers across Indonesian public universities with experience in blended learning and Artificial Intelligence (AI). To strike a balance between the need for specific, experience-based insights and the statistical rigor of our study, we combined judgmental sampling with the Slovin formula for determining our sample size. This hybrid methodological approach allowed for the targeted collection of data from a pertinent subset of the academic population while ensuring the representativeness and reliability of our findings. Specifically, the Slovin formula,  $n = \frac{N}{1 + N(e)^2}$ , where  $N$  is the estimated population of lecturers and  $e$  is a 5% margin of error, guided us to an appropriate sample size, enhancing the confidence in our study's conclusions. The survey commenced with a screening query to isolate lecturers with direct blended learning and AI teaching experience, thus ensuring the relevance and applicability of the collected data. By judiciously selecting our participants and carefully calculating our sample size, this study adeptly navigated the complexities of researching emerging educational technologies, providing valuable insights into the adoption and impact of blended learning and AI within the Indonesian higher education context.

The second section pertained to the demographic profile of the respondents. Lastly, the third section addressed multiple-item scales related to six constructs developed in this study. All items in the questionnaire were adapted from previous studies and measured using a five-point Likert scale ranging from 1 (strongly disagree) to 5 (strongly agree). Following this, a pre-testing phase was conducted to assess the questionnaire's reliability before the final data collection procedure. The results of the pre-test necessitated further descriptions of various variables, such as structure and support system, class schedule, method, assessment, pedagogical support, and blended learning. Subsequently, these descriptions were added, and the same respondents were asked to answer the revised questionnaire to confirm the reliability of the constructed items. Two expert panels specializing in research methodology and online learning were selected to review the items in the instrument, ensuring the content validity of the constructed items. Based on the comments provided by both experts, certain modifications were made.

### 3. Analysis and results

The instructor provided prior notice to the students before the commencement of the course, and subsequent to its implementation, the students were invited to willingly complete a questionnaire. This research questionnaire employs Likert's 5-point scale, encompassing choices such as "strongly disagree," "disagree," "neutral," "agree," and "strongly agree." For the first-year students from the Digital Content Design Department at Ling Tung University in Taiwan, a total of 173 valid questionnaires were disseminated and completed following a 9-week period of blended learning. Subsequently, SPSS 22.0 (IBM, USA) software was utilized to perform descriptive statistics and independent sample t-test methods to assess the differential analysis of various background variables on research variables. Smart-PLS 3.0 employs partial least squares structural equation modeling (PLS-SEM) to ascertain the correlation between observed variables and latent variables utilizing a reflective measurement model. Partial least squares structural equation modeling (PLS-SEM) is an analytical technique employed to establish or identify predictive models. Particularly for the analysis of causal models between latent variables, it surpasses the general linear structural relationship model, rendering it highly suitable for exploratory research. In contrast to covariance-based structural equation modeling (CB-SEM), which is evaluated based on covariance matrices, PLS-SEM is appropriate for conducting analyses on small samples (J. Hair & Alamer, 2022). (Kock & Hadaya, 2018) recommended that the sample size requirement for PLS should be at least 10 times the dimension of the majority of question items.

According to the principle of statistical conservativeness, it is imperative to employ a larger sample size. Consequently, the research necessitates a minimum sample size of no less than 80. Remarkably, the sample size for this particular study amounts to 625, satisfying the required minimum sample size. PLS-SEM is predominantly designed to identify whether the causal relationship possesses a statistically significant mutual linear association. Furthermore, it proves to be highly suitable for the establishment of theoretical models. In this study, PLS-SEM is utilized as a methodology to investigate the connection between the variables under scrutiny. Consequently, it predominantly utilizes the PLS Algorithm and Bootstrapping to repetitively sample 5000 times, thereby obtaining path coefficients and determining significance. It can discuss the correlation and influence between the dimensions.

**Table 1**

Questionnaire items and reference

| Dimensions                   | No | Question                                                                                                                             | Relevant Literature                                    |
|------------------------------|----|--------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------|
| Structure and Support System | 1  | Does the institution regularly revisit and communicate the strategic purposes for engaging in BL?                                    | Graham, C.R., Woodfield, W., & Harrison, J. B. (2013). |
|                              | 2  | Has your university published a uniform definition of BL?                                                                            |                                                        |
|                              | 3  | Does the institution regularly revisit the definition to assure that it is addressing the needs of increased numbers of BL adopters? |                                                        |

| Dimensions          | No | Question                                                                                                              | Relevant Literature                                                                                                                           |
|---------------------|----|-----------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| Schedule            | 4  | Does your technological infrastructure primarily focus on supporting traditional classroom instruction?               |                                                                                                                                               |
|                     | 5  | Is there an increased focus on providing technological infrastructure for BL faculty adopters?                        |                                                                                                                                               |
|                     | 6  | Is there a well-established technological infrastructure in place for BL faculty and student adopters?                |                                                                                                                                               |
|                     | 7  | Does the registration/catalog system not distinguish between BL courses and traditional courses?                      |                                                                                                                                               |
|                     | 8  | Is there an effort to designate BL and online courses in the registration/catalog system?                             |                                                                                                                                               |
|                     | 9  | Are designations for traditional, BL, and online courses available in the registration/catalog system?                |                                                                                                                                               |
| Pedagogical Support | 10 | Does pedagogical support primarily focus on strategies for traditional classroom instruction?                         |                                                                                                                                               |
|                     | 11 | Is there Professional Development available that focuses on strategies for blending online and on campus instruction? |                                                                                                                                               |

### 3.1. Demographic Profile

Drawing conclusions from the presented table, we can infer insights regarding the demographic profile of the respondents: The majority of the respondents are female (54.40%), with males accounting for 45.60%. The largest age group is 36-40 years old and above, with 57.50% of respondents falling into this category. The remaining 42.50% of respondents are 31-35 years old. All of the respondents are lecturers. Overall, the demographic profile of the respondents suggests that they are a relatively evenly split group of males and females, with the majority of them being in their late 30s and early 40s. Additionally, all of the respondents are employed as lecturers.

**Table 2**

Demographic Profile

| Demographics | Respondents (n=625)       | Percentage (%) |
|--------------|---------------------------|----------------|
| Gender       | Male                      | 45.60%         |
|              | Female                    | 54.40%         |
| Age          | 31-35 years old           | 42.50%         |
|              | 36-40 years old and above | 57.50%         |
| Work         | Lecturer                  | 100%           |

### 3.2.Measurement Model

The evaluation of the measurement model comprises internal consistency (reliability), convergent validity (loading  $\geq 0.708$  and average variance extracted  $\geq 0.5$ ), composite reliability (CR) with a threshold of  $\geq 0.7$ , and discriminant validity for the indicators, as outlined by (Hair & Alamer, 2022). Following this, the structural model reveals the outcomes of the research hypotheses. The findings of the measurement model are outlined in Table 2. Concerning cross loading, four items (STR4, PS1, ME5, and ME9) must be eliminated due to insufficient loading below 0.708. Regarding AVE and CR, all constructs demonstrated values exceeding 0.5 for AVE and 0.7 for CR, confirming the reliability of the measurement model at both the item and construct levels.

**Table 3**

Measurement model

| Construct                          | Items | Loadings     | CR<br>(>0.7) | AVE<br>(>0.5) |
|------------------------------------|-------|--------------|--------------|---------------|
| Structure<br>and Support<br>System | STR1  | 0.816        | 0.772        | 0.836         |

|                                    | BLA7  | 0.852        |              |               |
|                                    | BLA8  | 0.757        |              |               |
|                                    | BLA9  | 0.659        |              |               |
|                                    | BLA10 | 0.332        |              |               |

Subsequently, discriminant validity was evaluated using the HTMT criterion proposed by Henseler et al. (2015) and Franke and Sarstedt (2019). A more stringent criterion is represented by an HTMT value of  $\leq 0.85$ , while a more lenient criterion is represented by  $\leq 0.90$ . As depicted in Table 3, all HTMT values were below  $\leq 0.85$ . Consequently, it can be

inferred that the five constructs are clearly distinguishable by the respondents and that the measurement items for all constructs possess both validity and reliability.

Table 4

Discriminant Validity

|                           | Ass   | BL-AI | Method | Pedagogi | Schedule | Structure |
|---------------------------|-------|-------|--------|----------|----------|-----------|
| Assesmen                  |       |       |        |          |          |           |
| Blended Learning-AI       | 0.782 |       |        |          |          |           |
| Method_Blended_Learning   | 0.719 | 0.757 |        |          |          |           |
| Pedagogi_Support          | 0.604 | 0.642 | 0.678  |          |          |           |
| Schedule_Blended_Learning | 0.676 | 0.791 | 0.776  | 0.713    |          |           |
| Structure_Support_System  | 0.676 | 0.656 | 0.631  | 0.665    | 0.735    |           |

3.3. Structural Model

The next step involved assessing the structural model to evaluate the accuracy of the research model's estimates and the significance of the hypothesized relationships between the variables. Following the recommendation of J. F. Hair et al. (2021), a bootstrapping procedure with 5,000 samples was employed to examine the path coefficients, standard errors, t-values, and effect sizes (f2) of the structural model. The analysis of Table 4, which examines the direct relationships between various factors and Blended Learning-Artificial Intelligence (BL-AI), reveals noteworthy insights. Each hypothesis (H1 to H5) demonstrates a significant positive relationship, as indicated by the positive beta coefficients ( $\beta$ ) and the corresponding p-values below the conventional threshold of 0.05. Specifically, the structural support system (H1), schedule (H2), pedagogy support (H3), method in blended learning (H4), and assessment in blended learning (H5) all exhibit strong statistically supported connections with BL-AI.

The effect sizes (f2) further emphasize the practical significance of these relationships, ranging from 1.034 to 2.292. The decision to support each hypothesis is reinforced by the robust statistical evidence. Notably, the overall model fit, as measured by the coefficient of determination (R2), is substantial, with an impressive value of 0.541, signifying that the specified predictors collectively account for a significant proportion of the variance in BL-AI. This suggests that the proposed structural support system, schedule, pedagogy support, method in blended learning, and assessment in blended learning contribute meaningfully to the understanding and prediction of BL-AI, providing a comprehensive view of the direct relationships examined in this study.

**Table 5**

Direct Relationship

| Hypothesis                                | $\beta$ | SE    | P-value | $f^2$ | Decision  | $R^2$ |
|-------------------------------------------|---------|-------|---------|-------|-----------|-------|
| H1 : Structure Support System -> BL-AI    | 0.703   | 2.954 | 0.003   | 1.229 | Supported | 0.541 |
| H2 : Schedule -> Blended Learning - AI    | 0.624   | 4.49  | 0.004   | 1.109 | Supported | 0.459 |
| H3 : Pedagogical Support -> BL-AI         | 0.587   | 4.323 | 0.001   | 2.292 | Supported |       |
| H4 : Method in Blended Learning -> BL-AI  | 0.613   | 6.494 | 0.003   | 1.034 | Supported |       |
| H5 : Assesmen in Blended Learning-> BL-AI | 0.786   | 3.975 | 0.001   | 1.057 | Supported |       |

Table 5 explores the mediating relationships between key factors, namely Structure Support System, Schedule in Blended Learning, Method in Blended Learning, and Assessment in Blended Learning, with Pedagogy Support serving as the mediator, ultimately influencing Blended Learning-Artificial Intelligence (BL-AI). The beta coefficients ( $\beta$ ) for all hypotheses are positive, ranging from 0.587 to 0.703, indicating a significant direct effect of the independent variables on the mediator. The p-values for each hypothesis fall below the conventional threshold of 0.05, affirming the statistical significance of these relationships. Consequently, all hypotheses are supported, suggesting that Pedagogy Support indeed acts as a mediator in the relationship between Structure Support System, Schedule, Method, and Assessment with BL-AI. This implies that the impact of the structural support system, schedule, method, and assessment on BL-AI is partially, if not wholly, explained by the mediation of pedagogy support. This intricate web of relationships underscores the importance of considering not only the direct effects of certain factors on BL-AI but also the indirect effects mediated through pedagogy support. In conclusion, the findings highlight the nuanced interplay between these variables and emphasize the pivotal role of pedagogy support in shaping the integration of Blended Learning and Artificial Intelligence in educational settings. The statistically supported mediating relationships contribute to a more comprehensive understanding of the mechanisms at play in the complex landscape of educational technology adoption.

**Table 6**

Mediating Relationship

| Hypothesis                                             | $\beta$ | SE    | P-value | Decision  |
|--------------------------------------------------------|---------|-------|---------|-----------|
| Structure_Support_System -> Pedagogi_Support -> BL-AI  | 0.703   | 2.954 | 0.002   | Supported |
| Schedule_Blended_Learning -> Pedagogi_Support -> BL-AI | 0.624   | 4.49  | 0.001   | Supported |
| Method_Blended_Learning -> Pedagogi_Support -> BL-AI   | 0.587   | 4.323 | 0.002   | Supported |
| Assesmen -> Pedagogi_Support -> Blended Learning-AI    | 0.613   | 6.494 | 0.003   | Supported |

## 4. Discussion

This study demonstrates that all five independent variables—Structure and Support System, Schedule of Blended Learning, Pedagogical Support, Methodology in Blended Learning, and Assessment in Blended Learning—have a significant positive relationship with the dependent variable, Blended Learning-AI integration in teaching and learning. The effect sizes of these relationships range from small ( $f^2 = 0.034$ ) to large ( $f^2 = 2.292$ ), with Pedagogical Support showing the largest effect size, followed by Assessment in Blended Learning, Structure and Support System, Schedule of Blended Learning, and Methodology in Blended Learning. The overall model fit, as indicated by the coefficient of determination ( $R^2$ ), is significant at 0.541, suggesting a substantial explanatory power for the model.

Firstly, the research revealed that the Structure and Support System related to Blended Learning significantly impacts the integration of Blended Learning and AI in teaching and learning (H1), aligning with findings from existing research (Wan, 2023). The effectiveness of the Structure and Support System in facilitating Blended Learning-AI is determined by various factors, in order of impact: the institution's commitment to regularly revising and communicating the strategic purposes for engaging in Blended Learning, the existence of a well-established technological infrastructure for faculty and students, and an increased focus on technological support for faculty adopters. An indirect effect was observed in Hypothesis 2 (H2), where Pedagogical Support mediates the relationship between the Structure and Support System and Blended Learning-AI integration (consistent with Tayag, 2020; Zheng, 2020).

Secondly, it was found that the Class Schedule related to Blended Learning significantly influences Blended Learning-AI integration (H3), which is supported by existing research (Li et al., 2021; Wahid et al., 2022). The effectiveness of Class Schedule is influenced by efforts to designate Blended Learning and online courses in the registration/catalog system, the absence of distinctions between Blended Learning courses and traditional courses in the system, and the availability of designations for various course types. An indirect effect is noted in Hypothesis 4 (H4), where Pedagogical Support mediates the impact of Class Schedule on Blended Learning-AI integration, resonating with findings from Gosh & Anwar (2022) and Vásquez Astudillo (2020), highlighting the crucial role of Pedagogical Support in enhancing the effectiveness of Blended Learning-AI implementation, especially in managing class schedules.

Thirdly, the study identifies that the Methodology in Blended Learning significantly affects Blended Learning and AI in teaching and learning (H5), corroborating with the literature (Khalil et al., 2018). The impact of Blended Learning Methodology is shaped by various factors, such as the intensity of face-to-face interactions during the semester, the adoption of hybrid learning methods, and the use of AI-based teaching materials, among others. Hypothesis 6 (H6) reveals that Pedagogical Support acts as a mediator in this relationship (Hakim et al., 2023; Wan, 2023; Xiao & Jiang, 2023).

Fourthly, the research establishes that Assessment significantly affects Blended Learning and AI in teaching and learning (H7), in line with previous findings (Hooda et al., 2022; Liu et al., 2022). The influence of Assessment on Blended Learning-AI is driven by factors such as the utilization of the "quiziz" application for class assessments. An indirect effect is discovered in Hypothesis 8 (H8), where Pedagogical Support mediates the relationship between Assessment and Blended Learning-AI integration.

Lastly, the study shows that Pedagogical Support significantly contributes to Blended Learning and AI in teaching and learning, influenced by factors like the proportion of online learning and the availability of professional development focusing on blended teaching strategies (Alam, 2022; Brits et al., 2022).

In summary, this study's findings shed light on the multifaceted factors that facilitate the adoption of blended learning and AI in educational contexts, offering significant implications for educational policy, practice, and scholarly research.

## 5. Conclusions

This study investigated the factors that influence the implementation of blended learning based artificial intelligence (AI) in teaching and learning in Indonesia. The study found that all five independent variables (Structure and Support System, Schedule Blended learning, Pedagogy Support, Method in Blended Learning, and Assesmen in BL) have a significant positive relationship with the dependent variable, Blended Learning-AI in teaching learning. The study also found that Pedagogy Support mediates the relationship between Structure and Support System, Class Schedule, Blended Learning Method, and Assessment. The findings of this study provide valuable insights into the factors that influence the adoption of blended learning and AI in educational settings. The study has important implications for educational policy, practice, and research.

## 6. Study Limitations

- **Sample Diversity:** While our study successfully gathered data from 625 lecturers across various universities in Indonesia, the focus on higher education limits the generalizability of our findings to other educational levels. Future studies could explore the implementation of blended learning and AI in primary and secondary educational settings to provide a more comprehensive understanding.
- **Regional Representation:** The study predominantly represents the perspectives of lecturers in Indonesia, which may not fully encapsulate the challenges and opportunities of blended learning and AI integration in other cultural or regional contexts. Further research in diverse geographical areas would be beneficial.

- **Technological Infrastructure:** Our findings highlight the critical role of structural support systems; however, the variability in technological infrastructure across institutions may affect the applicability of our results. Studies that account for these disparities could offer more tailored recommendations.
- **Rapid Technological Advancements:** The fast-paced nature of AI and educational technology means that our study's insights might quickly become outdated. Continuous research is necessary to keep abreast of new developments and their implications for blended learning.

#### Future Research Directions:

- **Longitudinal Studies:** To better understand the long-term effects and sustainability of blended learning and AI in education, future research could employ longitudinal study designs.
- **Comparative Studies:** Comparing the effectiveness of blended learning and AI integration across different countries or educational systems could provide valuable insights into best practices and universal challenges.
- **Focus on Student Outcomes:** Further research could concentrate on the direct impact of blended learning and AI on student learning outcomes, engagement, and satisfaction to identify the most effective strategies and tools.
- **Technological Adoption Barriers:** Investigating the barriers to adopting blended learning and AI tools among educators and institutions could help in developing targeted interventions to facilitate smoother transitions to these innovative teaching models.

## Funding

The study was funded by BLU UIN Raden Fatah Palembang grant in 2023. The authors wish to thank Universitas Islam Negeri Raden Fatah Palembang for supporting this research.

## Aplicaciones tecnológicas relacionadas con la edad temprana infantil

*Technology applications related to early childhood*

**Coordinadora:**

**Dra. Olga María Alegre de la Rosa**

Universidad de la Laguna

*Spain*

### Introducción

Decir que las aplicaciones tecnológicas están relacionadas con la primera infancia es quedarse corto.

La primera infancia es un estadio de desarrollo que mejora la vida escolar. Es la etapa más importante para cambiar la vida futura de un niño. La educación de un niño empieza en casa.

La tecnología determina la calidad de la educación temprana de un individuo. La educación infantil mejora los conocimientos, las habilidades y desarrolla la personalidad y la actitud de los niños. Sobre todo, la tecnología en la primera infancia afecta la familia del niño.

Un niño con un alto grado de ayudas tecnológicas aumenta su capacidad de desarrollo.

En este monográfico sobre la importancia de las aplicaciones tecnológicas relacionadas con la primera infancia, discutiremos su valor en la escuela y la familia.

*To say that Technology applications related to early childhood is an understatement.*

*Early childhood is a weapon to improve school life. It is the most important stage for changing future lives. A child's education begins at home.*

*Technology certainly determines the quality of an individual's early education. Early childhood education improves knowledge, skills and develops personality and attitude of children. Most notably, early childhood technology affects a child's family.*

*A child with a high level of technological aids increases their developmental capacity.*

*This monograph on the importance of technology applications related to early childhood will tell you about its value in school and family.*

## Alcance

El monográfico **Aplicaciones tecnológicas relacionadas con la edad temprana infantil** abordará intervenciones tecnológicas tempranas para niños con necesidades especiales, modelos de atención integral que proporcionan servicios tecnológicos y apoyos de manera holística, abordando las necesidades del niño y su familia de manera coordinada, avances tecnológicos en el diagnóstico precoz con la colaboración de distintos profesionales (médicos, terapeutas, educadores y trabajadores sociales), e investigaciones tecnológicas recientes sobre educación temprana

*The monograph **Technology applications related to early childhood** will address early technology interventions for children with special needs, integrated care models that provide technology services and supports holistically, addressing the needs of the child and family in a coordinated way, technology advances in early diagnosis with the collaboration of different professionals (doctors, therapists, educators and social workers), and recent technology research on early education.*

## Descriptores/Líneas Temática

- Modelos tecnológicos para la educación temprana
- Guía para padres y madres sobre edad temprana
- Uso de tecnologías digitales para educación temprana
- Educación informática integrada en tecnología para la primera infancia
- Relación entre los antecedentes de los futuros maestros y el uso de la tecnología en la educación infantil: visión comparada
- Relación entre los antecedentes de los futuros maestros y el uso de la tecnología en la educación infantil: estudio de caso
- Comunicación educador-cuidador a través de la tecnología
- Aplicación tecnológica para la medición del desarrollo infantil: estudio comparado
- Aplicación tecnológica para la medición del desarrollo infantil: estudio de caso
- Revisión de la literatura de naturaleza empírica sobre el uso de la tecnología en la educación temprana
- Tecnología y sostenibilidad en el cuidado de la educación temprana

- El desarrollo artístico en la educación temprana con ayuda de dispositivos tecnológicos
- Los juegos y las actividades dramáticas en la educación temprana
- Mapeo bibliográfico y análisis de contenido en la educación científica de la primera infancia
- Educación tecnológica temprana en países europeos: estudio de caso
- Uso de la realidad virtual (VR), la realidad aumentada (AR) y la realidad mixta (MR) en educación temprana
- De la gamificación a la IA en educación temprana
- Aplicaciones móviles para niños con necesidades educativas especiales.

- *Technology models for early childhood education*
- *Parent's Guide to Early Childhood*
- *Use of digital technologies for early education*
- *Technology-integrated computer education for early childhood*
- *Relationship between prospective teachers' backgrounds and the use of technology in early childhood education.*
- *Educator-caregiver communication through technology.*
- *Technological application for the measurement of child development: a comparative study*
- *Technological application for the measurement of child development: case study*
- *Review of the empirical literature on the use of technology in early education*
- *Technology and sustainability in early childhood education care*
- *Artistic development in early childhood education using technological devices*
- *Games and dramatic play activities in early education*
- *Bibliographic mapping and content analysis in Early Childhood Science Education*
- *Early Technology Education in European countries: a case study*
- *The use of virtual reality (VR), augmented reality (AR) and mixed reality (MR) in early education*
- *From gamification to AI in early education*
- *Mobile applications for children with special educational needs.*

## EDITORES INVITADOS

**Dra. Aleksandra Karovska Ristovska**

*Universidad de Málaga (Spain)*

Profesora titular Profesor titular en la Universidad Ss. Cirilo y Metodio, Facultad de Filosofía, Departamento de Educación Especial y Rehabilitación

*Full professor at the Ss. Cyril and Methodius University, Faculty of Philosophy, Department of Special Education and Rehabilitation*

La Doctora Aleksandra Karovska Ristovska defendió su tesis doctoral sobre el Análisis Comparativo del Lenguaje de Signos Estadounidense (ASL) y el Lenguaje de Signos de Macedonia (MSL) en 2014 en la Facultad de Filosofía del Reino Unido, que le valió el título de Doctora en Ciencias de la Educación Especial y Rehabilitación. Profesora Asistente 2014, y asociada en 2019. De agosto de 2018 a enero de 2019, fue profesora visitante de Fulbright en la Universidad George Mason, Fairfax, Virginia del Norte, EE.UU. Asistió a seminarios y cursos e hizo visitas de estudio a universidades de Holanda, Alemania, Noruega, EE.UU. Durante la visita de estudio a Estados Unidos, obtuvo un certificado para trabajar con niños con dislexia usando el método Orton Gillingham. Ha participado en muchos proyectos nacionales e internacionales y es la directora del proyecto Erasmus KA203 FAST (Fostering Accessible Study Technologies: Accessible Learning Management System in Humanities and Social Sciences). Realiza una serie de actividades como miembro de comités de la Facultad de Filosofía (comité de Tecnologías de la Información y la Comunicación, comité de enseñanza, comité de evaluación).

*PhD. Aleksandra Karovska Ristovska defended her doctoral dissertation on Comparative Analysis of the American Sign Language (ASL) and the Macedonian Sign Language (MSL) in 2014 at the Faculty of Philosophy – UKIM, which earned her the title of Doctor of Special Education and Rehabilitation Sciences. Assistant Professor in 2014, and Associate in 2019. From August 2018 to January 2019, she was a Fulbright Visiting Professor at George Mason University, Fairfax, Northern Virginia, USA). She attended seminars and courses and made study visits to universities in the Netherlands, Germany, Norway, USA. During the study visit to the United States, she obtained a certificate for working with children with dyslexia using the Orton Gillingham method. She has participated in many national and international projects and is the head of the Erasmus + KA203 FAST project (Fostering Accessible Study Technologies: Accessible Learning Management System in Humanities and Social Sciences). She performs a series of activities as a member of committees of the Faculty of Philosophy (committee for information and communication technologies, committee for teaching, committee for evaluation).*

**Dr. José Manuel Sáez López**

UNED (Spain)

Profesor titular de Universidad. Facultad de Educación. UNED

*Full professor at the University. Faculty of Education. UNED*

El Dr. José Manuel Sáez López es profesor Titular en la Universidad Nacional de Educación a Distancia (UNED) España. Desde el año 2024 es Vicedecano de Estudiantes y Calidad. Su trabajo científico y académico ha sido publicado en 59 revistas revisadas por pares (9 JCR y 25 Scopus). Sus líneas de investigación son la integración de la tecnología educativa, estrategias metodológicas, ludificación y programación en el aula. Actividad Investigadora destacada: Sáez-López, J. M. & Sevillano-García, M. L. & Pascual-Sevillano, M. A. (2019). Aplicación del juego ubicuo con realidad aumentada en Educación Primaria.. *Comunicar*, 61 (XXVII), 71-82. <https://doi.org/10.3916/C61-2019-06> Sáez-López, J. M. & Sevillano-García, M. L. & Vázquez-Cano, E. (2019). The effect of programming on primary school students' mathematical and scientific understanding: educational use of mBot. *Educational Technology Research and Development*, 67(6), 1405-1425. <https://doi.org/10.1007/s11423-019-09648-5> Sáez-López, J.M., Román-González, M. y Vázquez-Cano, E. (2016). Visual programming languages integrated across the curriculum in elementary school. A two year case study using scratch in five schools. *Computers & Education*, 97, 129-141. <http://dx.doi.org/10.1016/j.compedu.2016.03.003>

*PhD. José Manuel Sáez López is Full Professor at the Universidad Nacional de Educación a Distancia (UNED) Spain. Since 2024 he is Vice-Dean of Students and Quality. His scientific and academic work has been published in 59 peer-reviewed journals(9 JCR and 25 Scopus). His research interests are the integration of educational technology, methodological strategies, gamification and classroom programming. Outstanding research activity:Sáez-López, J.M. & Sevillano-García, M.L. & Pascual-Sevillano, M.A.(2019). Application of ubiquitous gaming with augmented reality in Primary Education. *Comunicar*, 61 (XXVII), 71-82. <https://doi.org/10.3916/C61-2019-06>. Sáez-López, J.M. & Sevillano-García, M.L. & Vázquez-Cano, E. (2019). ## Dr. Daniel Mara

University "Lucian Blaga" of Sibiu,  
(Romania)

Profesor titular de la Facultad de Ciencias y Humanidades de la Universidad "Lucian Blaga" de Sibiu, Rumanía

*Full professor at Faculty of Social Sciences and Humanities, University "Lucian Blaga" of Sibiu, Romania*

Doctor en Psicología por la Universidad de Bolonia. Participación en más de 100 conferencias, congresos y simposios nacionales e internacionales. Conferenciante invitado a presentar trabajos científicos en universidades europeas de prestigio y de todo el mundo: Universidad de Bolonia (Italia) en 2000, 2008, 2010, 2012, 2013, 2018, 2019; Universidad de California Los Ángeles (EEUU) en 2002; Universidad de las Islas Baleares (España) en 2005, 2010, 2012, 2013, 2014, 2015, 2016, 2017, 2018; Universidad de León (España) en 2008, Universidad de Bérgamo (Italia) en 2008, Universidad de Sassari (Italia) 2003, 2014, 2017; Universidad de Birmingham (Reino Unido) en 2009, 2011; Facultad de Humanidades y Economía de Sieradz (Polonia) en 2011, 2017; Universidad Federal de Río de Janeiro (Brasil) en 2011; Universitas Airlangga Surabaya (Indonesia) en 2017. Autor de más de 100 artículos, trabajos científicos y estudios; Autor de 4 volúmenes - como autor único, 4 volúmenes como coautor, 14 capítulos en volúmenes colectivos, 10 volúmenes coordinados (de los cuales cuatro en solitario y seis en colaboración), un artículo en una revista indexada en Web of Science, 19 artículos publicados en los volúmenes de "proceedings" de conferencias internacionales indexadas en ISI Thomson con Peer-Review, 10 artículos en revistas BDI, 30 artículos publicados en revistas extranjeras y rumanas con Peer-Review y comité editorial internacional, 20 artículos publicados en revistas rumanas, 30 artículos en revistas no BDI.

*PhD University of Bologna. Participation in over 100 conferences, congresses, national and international symposiums. Guest lecturer – invited to present scientific work at European prestigious universities and around the world: University of Bologna (Italy) in 2000, 2008, 2010, 2012, 2013, 2018, 2019; University of California Los Angeles (USA) in 2002; University of the Balearic Islands (Spain) in 2005, 2010, 2012, 2013, 2014, 2015, 2016, 2017, 2018; University of Leon (Spain) in 2008, University of Bergamo (Italy) in 2008, University of Sassari (Italy) 2003, 2014, 2017; University of Birmingham (United Kingdom) in 2009, 2011; College of Humanities and Economics in Sieradz (Poland) in 2011, 2017; Federal University of Rio de Janeiro (Brazil) in 2011; Universitas Airlangga Surabaya (Indonesia) in 2017. Author of over 100 articles, scientific papers and studies; Author of 4 volumes – as a single author, 4 volumes as co-author, 14 chapters in collective volumes, 10 coordinated volumes (out of which four alone and six in collaboration), one article in a Web of Science indexed journal, 19 articles published in the «proceedings» volumes of ISI Thomson indexed international conferences with Peer-Review, 10 articles in BDI journals, 30 articles published in foreign and Romanian journals with Peer-Review and international editorial committee, 20 articles published in Romanian journals, 30 articles in non-BDI journals.*

## Dr. Christos Markides

University Cyprus

Profesor Asistente del Departamento de Ingeniería Eléctrica e Informática de la Universidad Frederick de Chipre

*Assistant Professor of the Department of Electrical and Computer Engineering and Informatics at Frederick University Cyprus*

El Dr. Christos Markides es miembro del Departamento de Ingeniería Eléctrica e Informática de la Universidad Frederick de Chipre. Se incorporó a la facultad en 2002, donde imparte cursos de licenciatura y posgrado. Se licenció con honores en Cibernética e Informática y obtuvo un máster (Dist.) en Ingeniería y Ciencias de la Información por la Universidad de Reading (Reino Unido) en 1999 y 2001, respectivamente. Se doctoró en la Escuela de Ingeniería y Ciencias Matemáticas de la City University de Londres (Reino Unido) en 2014. Es miembro de IEEE y ACM, y revisor de IEEE. El Dr. Christos Markides ha participado activamente en el diseño y desarrollo de varios sistemas de información para plataformas de escritorio y móviles para diferentes programas de investigación financiados por la Unión Europea y la Fundación para la Investigación y la Innovación. Sus intereses de investigación actuales incluyen la investigación de tecnologías y arquitecturas para sistemas y plataformas de Big Data en términos de sistemas operativos subyacentes y sistemas de bases de datos. Además, sus intereses de investigación incluyen Big Data Analytics, Deep Learning y Visualización en entornos de computación móvil y en la nube, para obtener información para diversos proyectos de análisis de datos.

*PhD. Christos Markides is a member of the Department of Electrical and Computer Engineering and Informatics at Frederick University Cyprus. He joined the faculty in 2002, teaching at undergraduate and postgraduate level courses. He received his BSc Hons. in Cybernetics and Computer Science, and MSc (Dist.) in Engineering and Information Sciences from the University of Reading, UK in 1999 and 2001 respectively. He received his Ph.D. degree from the School of Engineering and Mathematical Sciences at City University London, U.K in 2014. He is a member of IEEE, and ACM, and reviewer for IEEE. Dr Christos Markides has actively participated in designing and developing various information systems for desktop and mobile platforms for different research programmes funded by the European Union and the Research and Innovation Foundation. His current research interests include the investigation of technologies, and architectures for Big Data systems and platforms in terms of the underlying operating systems, and database systems. Moreover, his research interests include Big Data Analytics, Deep Learning, and Visualisation in Mobile and Cloud Computing Environments, for obtaining insight for various data analysis projects.*
